

APEXSQL

Edit

ApexSQL Edit

for SQL Server 2000 and 2005

The Industry Standard for SQL Server Editors/IDEs

Data Sheet

ApexSQL Edit is the Industry leading Editor, Integrated Developer Environment (IDE). ApexSQL Edit's customizable design, sophisticated source control integration and extensive feature set make it the preferred IDE by thousands of SQL Developers and DBAs.

"You guys are writing a great tool -- keep up the great work. We're getting this tool for our developer team :)"

*Jerry Kurtz
OHIC Insurance Company*

"All I can say is that I was pretty blown away by the product. I can't wait to get the next version that's coming out soon."

*Wade Winningham
Updrift, Owner*

"And may I say, AWESOME Product!! ApexSQL Edit handles my large tables just as well as my small ones, and combined with its easy to use interface, this product is a no brainer to help increase our productivity. Thanks for the sweet product at a great price! "

*Mike Davies
Database Developer
Diligenz Inc.*

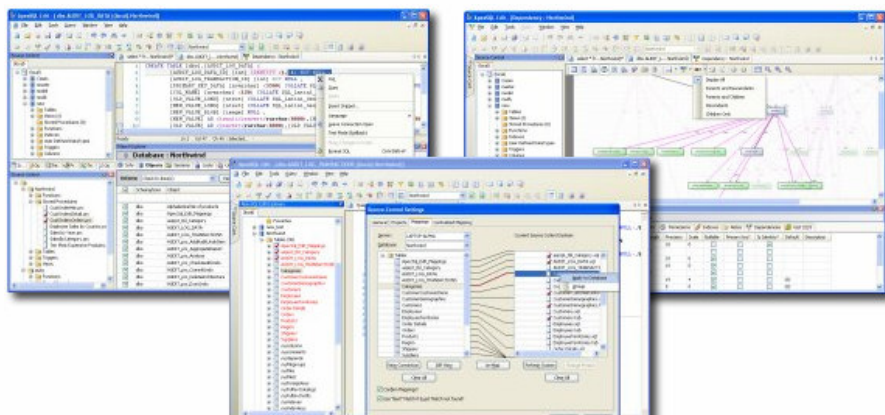

"Great product, especially the 2.1 version! I particularly like the fact that you are taking user input and constantly improving your products."

*John Rempel
Software Developer
GoodLife Fitness Clubs*

Use ApexSQL Edit to:

- Integrate your SQL development environment with Source Control. ApexSQL Edit integrates seamlessly with any SCC compliant source control system including VSS, SourceGear Vault, Subversion, Perforce, and Team Foundation Server.
- Write SQL more quickly and efficiently. Intellisense, dynamic code snippets, code templates, expandable code regions, and auto-replacements are just some of the Rapid Application Development features.
- Organize your work into sophisticated project groups that combine scripts, query results, schema items, notes and tasks into a logical work unit. Scripts can also be organized into workgroups for automatic saving and opening as a group.
- Personalize your development environment to suit exactly how you work. With the totally customizable environment, combined with the ability to add user defined templates and snippets and assign default actions for a variety of events – ApexSQL Edit will work for you not the other way around.

Competitive Upgrades available of up to 40%!

ApexSQL Edit's Key Features

- Sophisticated **source control integration** with ANY SCC compliant source control system not just Visual Source Safe. Includes powerful mapping features, both individual and centralized for teams, differential analysis and reports.
- Powerful productivity features including intelliprompt, auto-replace, code outlining/collapsible regions, programmable snippets, templates and much more.
- Unique Object Explorer – allows users to interact with ApexSQL Edit in another dimension, exposing all schema objects in a linear grid format to source control, scripting, data and dependency analysis, filtering and more.
- Graphical Dependency viewer demonstrates object interdependencies using a proprietary dependency viewer.
- Powerful data editing capability including column level grouping and filters.
- SQL Server reporting services integration and deployment projects.
- Fully customizable Microsoft Standard interface including 3 themes, customizable menus and diamond dockable panels.
- ApexSQL Edit projects allow the grouping of scripts, schema items, notes, tasks and other development items into a logical work group.
- Total customization from the user interface, to menu extensions, to default actions, to user defined snippets and templates.
