PrimalScript 3.0

What is PrimalScript?

PrimalScript 3.0 is a professional scripting environment that adds significant efficiency to the scripting process. Ideal for web developers and system administrators, PrimalScript supports 30+ modern languages, in a code based tool that assures maximum control.

More than just an advanced editor, PrimalScript streamlines a full range of other development tasks. You can also manage files, reference help resources, run external tools, and deploy your projects - in a single environment.

Dozens of practical shortcuts save you hours every week. Wizards and templates get you started quickly. Instant support and resources put the right answers at your fingertips. The interface, organization and navigation are not merely sensible – they're also customizable to your personal needs.

Finally PrimalScript delivers all this power affordably, and in about 10M of drive space on almost any Windows machine.

Full editing support for more than 30 languages

Cuts scripting time by 50% or more, while boosting accuracy and ease.

- **WMI Script Wizard.** Get perfect scripts the first time by letting the wizard write them for you. Modify the inserted code to match your needs.

- **Extensive as-you-type help (PrimalSense).** Help includes pop-up and one-click access to object member lists, code completion, function lists, parameter help, auto case correction, HTML tag completion and much more.

- **Superior script coloring.** Review code quickly, and with less strain. Special coloring for web development differentiates HTML embedded scripts as well as server and client side scripts.

- **Advanced code navigation.** Navigate by class name, methods, properties, function name, HTML tag, line and other methods.

- **Other editing support.** Work faster using regular expression search, line sort, bulleting & line numbering, virtually unlimited persistent undo and bookmarks.

Advanced file and project management

Simplify the routine details of development.

- **Management of files and multiple projects.**

Organize files into project groups, perform project-wide tasks, work on multiple projects simultaneously and create multiple configurations.

- **Project Wizards.** Quickly create new projects from scratch: web projects, WSH projects, projects in existing folders, and projects based on FTP sites. Template-based wizards can be easily modified to suit your needs.

- **File navigation shortcuts.** Move items around quickly by file name, by global object, by keyboard and by searching.

Communication integration. Interact with your team instantly from within your work environment.

- **Deployment support.** Choose from numerous ways to copy files to a local network or across the Internet, in one operation.

Integrated tools & help resources

Keep essential information and applications right at hand, so you can work efficiently, with fewer distractions.

- **Source Control integration.** Easily interface to source control. Add a complete project to source control in one operation. Compatible with all MSSC API providers.

- **External tools integration.** Quickly link to the utilities you use often: visual development tools, specialized code analyzers, and other external applications. Pass along specified parameters.

Help resources integration. Access help resources in one click. Organize help files, HTML files, web links, and PDF files into groups and sub folders for quick access. Perform context sensitive search across multiple help files.

Support for 30+ modern scripting languages.

No other tool supports so many modern scripting choices: WMI, WSH, VBScript, Jscript, XML, HTML, ASP, JSP, JavaScript, ColdFusion, PHP, Perl, Python, TCL and many others.

Who needs PrimalScript?

PrimalScript was developed for professionals who develop or manage scripts on a regular basis. For example:

- Windows system administrators who write automation scripts.
- Web application developers who want the control of a code based, rather than visual, environment.
- Programmers working in multiple modern scripting languages

MS System Administrators

There's no faster, easier way to create automation scripts than with PrimalScript. Practical script wizards, plus support for WSH and WMI, assure outstanding results in half the usual time.

No scripting expertise is needed. The WMI Script Wizard writes code for you. You can add code into your scripts without any programming, and then use powerful editing features to easily modify as necessary.

- Multi-level PrimalSense includes code completion, pop-up member lists, function parameter help for your own classes.

- WMI Script Wizard writes code for you.
- WSH Support frees you from dealing with WSH (XML format) file details
- MCP "Editor's Choice" award for scripting

Web Developers

PrimalScript helps you spend more time on the art of development, and less time on the endless details. No other tool supports so many modern languages, while streamlining all aspects of your project.

- Advanced syntax coloring in ASP, PHP, and more. Scripts embedded in HTML are colored by scripting language. Server- and client-side scripts are differentiated by background color.
- PrimalSense as-you-type help including code completion, object member lists, function lists, and parameter help.
- Fast deployment to a web server in one operation.
- Support for 30+ modern languages: ASP with VBScript (regular and embedded), PHP, ColdFusion, JSP, HTML, Perl, Javascript, many more.

How PrimalScript Benefits Your Company

PrimalScript helps your system administrators create the scripts that automate your networks – and do it in about half the usual time.

- **Make your networks run better.** PrimalScript helps your company easily gain the automation that's needed for smoother, more consistent network operations.
- **Use the brains you're paying for.** PrimalScript handles the tiresome details inherent in scripting. Skilled staff can focus on higher level tasks.
- **Get more scripts in less time.** Scripts can be created in about half the usual time, with fewer errors.
- **Support a wide range of employees.** Full featured software offers benefits for both basic and advanced skill levels.
- **Stay flexible.** One package supports almost all modern languages. Ideal for scripting on a wide range of projects.

How PrimalScript Benefits Your Department

- **Make your networks run better.** PrimalScript, lets you easily create the scripts that simplify network administration.
- **Write scripts in half the time.** Wizards, as you type help, code completion, coloring and other editing aids assure the right results, the first time.
- **Streamline related tasks.** Manage files, reference help resources, run external tools and deploy scripts with far more efficiency.
- **Stop wasting time on details and distractions.** Help, information and external tools are integrated into a single environment.
- **Avoid special training.** No scripting or programming expertise is required to create effective scripts.
- **Stay flexible.** Get support for 30+ languages, plus plenty of options for customizing your procedures.
- **Save money and memory.** Licenses are inexpensive, memory requirements are a non-disruptive 10M drive space.
