

Product Features

Hyena is invaluable as a day-to-day system management tool, but also includes powerful migration, reporting, and security functions. Many of the functions can be applied to multiple computers at the same time, reducing time spent making monotonous changes.

Multiple-domain Management...at last!

Hyena includes support for single and multiple-domain environments. Each domain is always visible and available as a top-level object. Synchronization of either the entire domain or a single domain controller can be performed with a single mouse click.

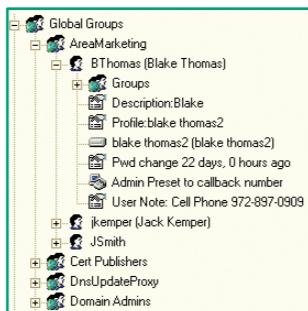

Users

Reduce your time spent managing user accounts. Hyena supports user additions, deletions, and single and multiple user modifications.

Take control over home directory creation and permissions, optional renaming of home directories, plus many other improvements to standard NT/2000 user management. Hyena's powerful user detail view can show all user information, for ease of sorting and filtering specific user properties. Need to change passwords on multiple accounts on many computers? Not a problem!

Group and Group Member Management

In addition to standard group management functions, Hyena's easy viewing of group members and member user properties are a real plus. Groups can also be copied, cloned, and renamed in seconds. Advanced functions include adding a group member to multiple computers in one operation.

Events

Hyena provides one-mouse-click access to the built-in Event Viewer utility, or can display events from one or more computers into its own viewer, for easy sorting and filtering control.

Server and Workstation Management

For each server or workstation, Hyena allows control over nearly every accessible function, including users, share (including hidden shares), events, services, devices, sessions, open files, printers, disk space, user rights, scheduled tasks, and account/audit policy information. Remote shutdown and reboot options are also available. Hyena's Object Manager feature lets you enter in hard-to-reach computers by name or TCP/IP address into custom groups, for faster and easier access.

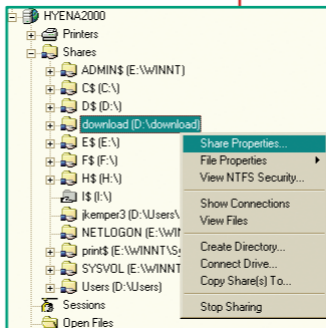

Services

Hyena supports viewing services and driver status for any server or workstation on the network. All of the information in the service database is available, including startup options, dependencies, and complete path and filename for the service. Hyena supports modification of service and device startup options, Startup options can be configured for an unlimited

number of computers at the same time, allowing for total service control for large numbers of client workstations.

Share and File Management

Hyena allows complete control over creating and removing shares, as well as browsing share folder contents without the need for drive mapping. Hyena integrates directly with NT/2000 Explorer interface, thereby giving direct access to Explorer's popup context menus. Share permissions can be managed in Hyena as well. Hyena's file, directory, and share security auditing functions can display all of the user and group permissions for these objects at the same time, thereby giving the administrator an enterprise-level view of security.

...Still More Features

Printers

Hyena also allows complete control over remote printer queues without the need to attach to the server or printer. View and manage print jobs, even from multiple printers on multiple servers at the same time!

Sessions and Open Files

Any active sessions or open files can be quickly and easily displayed for any server or workstation on the network. With Hyena's powerful sorting capabilities, the user, computer, or filename can be easily sorted for quick problem diagnosis.

Disk Space

Server	Drive	Format	Total	Used	Free	%Used	%Free	Volume	Serial #
HYENA2000	C:	FAT	2,000 GB	1,525,000 MB	1,480 GB	61%	39%	143,261,595	
HYENA2000	D:	FAT	2,000 GB	1,350 GB	650,94 MB	67%	33%	54,900,000

View the available

and free disk space on all disk drives for one or more remote NT servers or workstations.

Messaging

Messaging functions in Hyena include sending messages to any selectable user or workstation on the network. The messaging functions are built into all user and computer object displays for quick and easy alert capability to active resources.

Reporting and Exporting

Hyena provides built-in Microsoft Access-based reporting options, plus supports exporting delimited data to either text files or the clipboard.

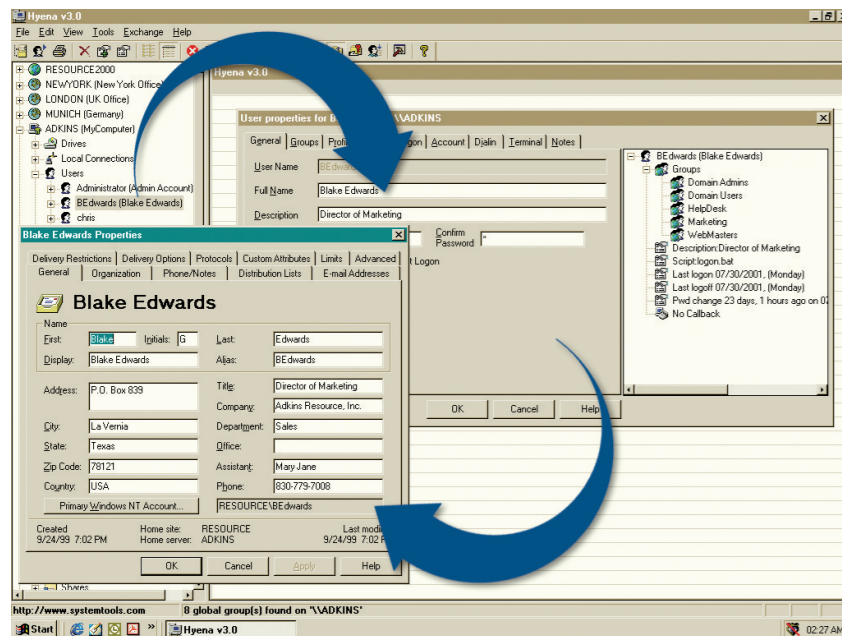

Custom Tool Integration

Hyena includes a user customizable menu for adding your favorite utilities and commands, and has several options available to fine-tune Hyena's performance and to fit any network environment.

Hyena[®] Enterprise Features

Direct Microsoft Exchange Access

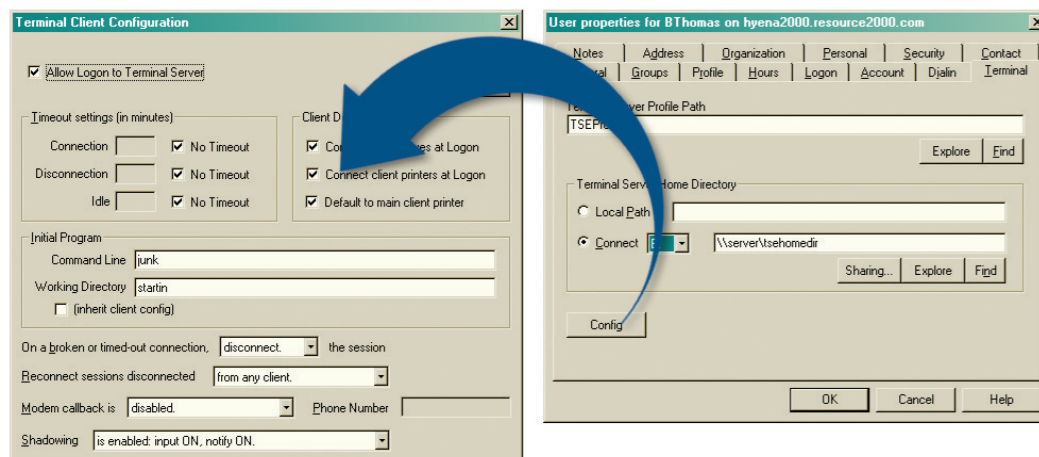

Hyena's new **Enterprise Edition** adds totally integrated Microsoft Exchange and Terminal Server user management features.

★ Access the native Exchange mailbox properties when adding or modifying users with ease.

★ View and modify the Terminal Server home directory and configuration options directly within the console.

Terminal Server User Management

System Requirements

Hyena requires administrator-level access for most functions, although a help desk or power user can make use of many of the functions. Hyena is compatible with Windows NT 4.0, Windows 2000, and Windows XP, in any configuration. Installation on a client (workstation) is all that is required; there are not any server components to install.

Licensing Details

Hyena is licensed only to the users actually using the software, typically systems administrators and network support staff. It does not matter how many end-users or computers are within your organization. With prices starting at only a few hundred dollars (US) per administrator, our unique licensing model makes Hyena one of the most cost-effective products available on the market! Multi-admin license packs are also available, further reducing the per-seat licensing costs.
